DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24 and 34-74, drawn to a gain equalizer that demultiplexes a received optical signal into separate wavelength channels and amplifies each of the separate channels wherein the components are integrated on the same substrate, classified in class 359, subclass 349.
- II. Claims 25-33, drawn to a gain equalizer utilizing a low frequency response optical signal gain adjustment component and a high frequency gain adjustment component in series with the low frequency component, classified in class 359, subclass 337.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation that do not suggest each other.
